

Pay-Per-Use-AI

PayPerAI is a state-of-the-art decentralized platform bridging the gap between premium AI models and Web3 finance. We solve the issue of bloated monthly AI subscriptions by introducing a frictionless Pay-Per-Use model powered by the Algorand Blockchain.

PAYPERAI SYSTEM ARCHITECTURE - PRODUCTION OVERVIEW

Key Features

1. Infinite Scaling via Algorand Box Storage & Trustless Escrows.
2. AES-256-GCM BYOK Encryption & SIWA Authentication.
3. High-Performance PostgreSQL Ledger & Container-Ready Services.
4. Token-Bucket Rate Limiting
5. Algorand Node Rotation (RPC Load Balancing)

Tech Stack- React Js, Python+Fast Api, Algorand (Testnet), Algorand Box Storage, PostgreSQL, AlgoSdk Server-Sent Events (SSE).

Business Use Case

“AI access is broken — you pay for all-you-can-eat but only eat a snack.”

Total Addressable Market

1. **Global AI SaaS market:** \$200B+ by 2030
2. **Pay-per-use / API billing segment (devs, indie builders, casual users):** ~\$18B addressable
3. **Entry Point:** 89% of developers prefer token-based pricing over subscriptions

Customer Value Proposition

1. **Consumer:** Pay \$0.001 per query. No subscriptions. Switch models mid-chat.
2. **Developer/Creator:** Plug in your idle API key, earn 90% of every query run against your agent — passively.
3. **Enterprise:** AES-256-GCM encrypted key custody on-chain. No vendor lock-in.

Revenue Model

1. **Default AI Models:** 3x guaranteed margin (~66%). Dynamic oracle protects wholesale USD API costs against crypto volatility.
2. **Creator Marketplace:** 10% smart-contract transaction fee automatically collected on every creator query. Zero API overhead.

Project Scalability

Validated by the Market: 100+ In-Person User Reviews

Financial Scaling

1. **Users Pre-Fund Compute**: Smart contracts require users to deposit funds before any AI is generated.
2. **Zero Server Debt**: We never front the cash for API bills, completely eliminating the risk of bankruptcy during massive traffic spikes.
3. **Guaranteed Margins**: Because revenue scales perfectly in sync with API costs, 100X growth is instantly profitable without burning venture capital.

Market Scaling

1. **No Banking Barriers**: Bypasses credit card restrictions, currency conversions, and high payment fees.
2. **Instant Global Reach**: Unlocks developing nations and expands the market to anyone with an internet connection.
3. **Frictionless Monetization**: Uses crypto micropayments to instantly monetize users globally with near-zero fees.

Architecture Scalability (Can this handle 10X growth?)

1. Infinite Web Scaling
2. Uninterrupted AI Access: We use a dynamic AI routing gateway

Algorand
